Fallen Order not launching Working 2021 Fix!

Bug

After weeks of searching online for a solution, I finally found a working one!

Control Panel >
System and Security >
System >
Advanced system settings (on the left) >
Environment Variables (button near the bottom) >
New... (under System variables) >

Then enter "OPENSSL_ia32cap" as the Variable name, and "~0x20000000" as the variable value. Hit save and you should be able to launch the game!

Did you find a solution?

Nope. I tried EVERYTHING. I'm sick and tired, I'll just skip it and move on to survivor. Maybe I'll watch a playthrough.

I found the solution!

I delved in the r/Piracy community where I found the sacred megathread, and that took me to the holy website of steam rip.

They have a pre-installed version that worked instantly!

Thanks dude it worked for me too. But there is still an issue. I have no dialogue sound in the game. How about you?

GreekMaeball
It almost opened and then crashed immediately
Responder Dar Premio Compartir

fires123
Did you fix it? if so how?
Responder Dar Premio Compartir

GreekMaeball
still nope lol
